DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 4, 7, 9, 12, 46, 49, 51, and 54 are rejected under 35 U.S.C. 102(e) as being anticipated by Komiya (US 2002/0105493).

Regarding claims 4, 7, 9, 12, 46, 49, 51 and 54, Komiya teaches of an organic EL display device comprising a plurality of pixels each comprising a light emitting element using organic electroluminescent elements (see paragraph 54. Komiya does not precisely teach that the light emitting elements comprise the organic compound layer between an anode and a cathode. It is inherent organic electroluminescent displays to have the organic layer between an anode and a cathode.); and a source signal line driver circuit (see Fig. 2, reference character 200), wherein said source signal line driver circuit comprises a switching circuit for switching a polarity of an output signal (see paragraph 48), and a polarity of a digital video signal input to said switching circuit is inverted by means of a shift signal to be input into said switching circuit and a resultant signal is then input into said plurality of pixels (see Fig. 2 and paragraph 48. (switches 21-24 each include inverters and the polarity of the signal sources is inverted after a predetermined period, therefore, although not specifically mentioned, it is inherent to have the polarity of the

digital video signal inverted by means of a shift signal because some signal, namely a switch, shift, invert, or reverse polarity signal is inherently necessary to cause the inversion the polarity after said predetermined period).

Claim Rejections - 35 USC § 103

3. Claims 8, 13, 50 and 55 rejected under 35 U.S.C. 103(a) as being unpatentable over Komiya (US 2002/0105493.

As to claims 8,13,50,55, although not specifically taught, it is well known to someone of ordinary skill in the art of EL displays for a telephone, camera, or head up display, or a PC to have be a light emitting display.

Allowable Subject Matter

1. Claims 5-6,10-11,47-48,52-53 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

2. Applicant's arguments with respect to claims 4-13,46-55 have been considered but are moot in view of the new ground(s) of rejection.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ricardo L. Osorio whose telephone number is 571-272-7676. The examiner can normally be reached on Monday through Thursday from 7:00 A.M. to 5:30 P.M. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin Shalwala whose telephone number is 571-272-7681.
